Matrices and System of Linear Equations

A $m \times n$ **system of linear equations** is a set of m equations in n variables:

$$\begin{array}{ccccccccc} a_{11}x_1 & + & a_{12}x_2 & + & \dots & + & a_{1n}x_n & = & b_1 \\ a_{21}x_1 & + & a_{22}x_2 & + & \dots & + & a_{2n}x_n & = & b_2 \\ a_{31}x_1 & + & a_{32}x_2 & + & \dots & + & a_{3n}x_n & = & b_3 \\ \vdots & & \vdots & & & & \vdots & & \vdots \\ a_{m1}x_1 & + & a_{m2}x_2 & + & \dots & + & a_{mn}x_n & = & b_m \end{array}$$

Matrices

A **matrix** is a rectangular array of numbers

$$\begin{bmatrix} a_{11} & a_{12} & \cdots & a_{1j} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2j} & \cdots & a_{2n} \\ \vdots & \vdots & & \vdots & & \vdots \\ a_{i1} & a_{i2} & \cdots & a_{ij} & \cdots & a_{in} \\ \vdots & \vdots & & \vdots & & \vdots \\ a_{m1} & a_{m2} & \cdots & a_{mj} & \cdots & a_{mn} \end{bmatrix}$$

There are two primary ways of writing a linear systems using matrices.

There are two primary ways of writing a linear systems using matrices.

An Augmented Matrix

$$\left[\begin{array}{cccc|c} a_{11} & a_{12} & \cdots & a_{1n} & b_1 \\ \vdots & \vdots & \ddots & \vdots & \\ a_{m1} & a_{m2} & \cdots & a_{mn} & b_m \end{array} \right]$$

There are two primary ways of writing a linear systems using matrices.

An Augmented Matrix

$$\left[\begin{array}{cccc|c} a_{11} & a_{12} & \cdots & a_{1n} & b_1 \\ \vdots & \vdots & \ddots & \vdots & \\ a_{m1} & a_{m2} & \cdots & a_{mn} & b_m \end{array} \right]$$

A Matrix Equation (We will look at these in section 10.4)

As the matrix equation $A\vec{x} = \vec{b}$, where:

$$\underbrace{\begin{bmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{m1} & a_{m2} & \cdots & a_{mn} \end{bmatrix}}_A \underbrace{\begin{bmatrix} x_1 \\ \vdots \\ x_n \end{bmatrix}}_{\vec{x}} = \underbrace{\begin{bmatrix} b_1 \\ \vdots \\ b_m \end{bmatrix}}_{\vec{b}}$$

Example 1

Consider the system of linear equations:

$$3x - 4y = -6$$

$$2x - 3y = -5$$

Example 1

Consider the system of linear equations:

$$3x - 4y = -6$$

$$2x - 3y = -5$$

The augmented matrix for this system is:

$$\left[\begin{array}{cc|c} 3 & -4 & -6 \\ 2 & -3 & -5 \end{array} \right]$$

Example 1

Consider the system of linear equations:

$$3x - 4y = -6$$

$$2x - 3y = -5$$

The augmented matrix for this system is:

$$\left[\begin{array}{cc|c} 3 & -4 & -6 \\ 2 & -3 & -5 \end{array} \right]$$

Example 2

Consider the augmented matrix:

$$\left[\begin{array}{cc|c} 5 & 2 & 13 \\ -3 & 1 & -10 \end{array} \right]$$

Example 1

Consider the system of linear equations:

$$3x - 4y = -6$$

$$2x - 3y = -5$$

The augmented matrix for this system is:

$$\left[\begin{array}{cc|c} 3 & -4 & -6 \\ 2 & -3 & -5 \end{array} \right]$$

Example 2

Consider the augmented matrix:

$$\left[\begin{array}{cc|c} 5 & 2 & 13 \\ -3 & 1 & -10 \end{array} \right]$$

This matrix corresponds to the system of linear equations:

$$5x + 2y = 13$$

$$-3x + y = -10$$

Example 3

Consider the system of linear equations:

$$2x - y + z = 0$$

$$x + z - 1 = 0$$

$$x + 2y - 8 = 0$$

Example 3

Consider the system of linear equations:

$$2x - y + z = 0$$

$$x + z - 1 = 0$$

$$x + 2y - 8 = 0$$

The system must be in standard form before we can write the augmented matrix.

Example 3

Consider the system of linear equations:

$$2x - y + z = 0$$

$$x + z - 1 = 0$$

$$x + 2y - 8 = 0$$

The system must be in standard form before we can write the augmented matrix.

$$2x - y + z = 0$$

Example 3

Consider the system of linear equations:

$$2x - y + z = 0$$

$$x + z - 1 = 0$$

$$x + 2y - 8 = 0$$

The system must be in standard form before we can write the augmented matrix.

$$2x - y + z = 0$$

$$x + 0y + z = 1$$

Example 3

Consider the system of linear equations:

$$2x - y + z = 0$$

$$x + z - 1 = 0$$

$$x + 2y - 8 = 0$$

The system must be in standard form before we can write the augmented matrix.

$$2x - y + z = 0$$

$$x + 0y + z = 1$$

$$x + 2y + 0z = 8$$

Example 3

Consider the system of linear equations:

$$2x - y + z = 0$$

$$x + z - 1 = 0$$

$$x + 2y - 8 = 0$$

The system must be in standard form before we can write the augmented matrix.

$$2x - y + z = 0$$

$$x + 0y + z = 1$$

$$x + 2y + 0z = 8$$

Thus, the augmented matrix is:

$$\left[\begin{array}{ccc|c} 2 & -1 & 1 & 0 \\ 1 & 0 & 1 & 1 \\ 1 & 2 & 0 & 8 \end{array} \right]$$

Gaussian Elimination

Use row operations until in **Row Echelon Form**:

$$\left[\begin{array}{ccccc|c} 1 & c_{12} & c_{13} & \cdots & c_{1n} & d_1 \\ 0 & 1 & c_{23} & \cdots & c_{2n} & d_2 \\ 0 & 0 & 1 & \cdots & c_{3n} & d_2 \\ \vdots & \vdots & \vdots & \ddots & \vdots & \vdots \\ 0 & 0 & 0 & \cdots & 1 & d_m \end{array} \right]$$

Gaussian Elimination

Use row operations until in **Row Echelon Form**:

$$\left[\begin{array}{cccc|c} 1 & c_{12} & c_{13} & \cdots & c_{1n} & d_1 \\ 0 & 1 & c_{23} & \cdots & c_{2n} & d_2 \\ 0 & 0 & 1 & \cdots & c_{3n} & d_2 \\ \vdots & \vdots & \vdots & \ddots & \vdots & \vdots \\ 0 & 0 & 0 & \cdots & 1 & d_m \end{array} \right]$$

Then back solve the system:

$$x_1 + c_{12}x_2 + c_{13}x_3 + \cdots + c_{1n}x_n = d_1$$

$$x_2 + c_{23}x_3 + \cdots + c_{2n}x_n = d_2$$

$$\vdots$$

$$x_n = d_m$$

Example 6

Consider the system

$$\begin{array}{rcccccccl} x & + & y & + & z & = & 3 \\ 2x & - & 3y & - & z & = & -8 \\ -x & + & 2y & + & 2z & = & 3 \end{array}$$

Example 6

Consider the system

$$\begin{array}{rrcrcl} x & + & y & + & z & = & 3 \\ 2x & - & 3y & - & z & = & -8 \\ -x & + & 2y & + & 2z & = & 3 \end{array}$$

We can write this as the augmented matrix:

$$\left[\begin{array}{ccc|c} 1 & 1 & 1 & 3 \\ 2 & -3 & -1 & -8 \\ -1 & 2 & 2 & 3 \end{array} \right]$$

We now want to use row operations to transform this augmented matrix into Row Echelon Form.

Example 6

$$\left[\begin{array}{ccc|c} 1 & 1 & 1 & 3 \\ 2 & -3 & -1 & -8 \\ -1 & 2 & 2 & 3 \end{array} \right]$$

Example 6
