Matrix

A matrix is a rectangular array of elements or entries (numbers or functions) arranged in rows (horizontal) and columns (vertical).

$$A = \begin{bmatrix} a_{11} & a_{12} & \cdots & a_{1n} \\ a_{21} & a_{22} & \cdots & a_{2n} \\ \vdots & \vdots & \ddots & \vdots \\ a_{m1} & a_{m1} & \cdots & a_{mn} \end{bmatrix}$$

The **order** of *A* is $m \times n$. If m = n, we call the matrix **square**.

The **order** of *A* is $m \times n$. If m = n, we call the matrix **square**.

Equal Matrices

Two matrices of the same order are **equal** if their corresponding entries are equal. If matrices $A = [a_{ij}]$ and $B = [a_{ij}]$ are both $m \times n$, then

$$A = B \Leftrightarrow a_{ij} = b_{ij}, \quad 1 \le i \le m, \ 1 \le j \le n$$

Special Matrices

• The $m \times n$ zero matrix, denoted $\mathbf{0}_{mn}$, has all its entries equal to zero.

- The $m \times n$ zero matrix, denoted $\mathbf{0}_{mn}$, has all its entries equal to zero.
- A diagonal matrix is:

$$D = \begin{bmatrix} a_{11} & 0 & \cdots & 0 \\ 0 & a_{22} & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & a_{mn} \end{bmatrix}$$

• The $n \times n$ identity matrix, denoted I_n is:

$$I = \begin{bmatrix} 1 & 0 & \cdots & 0 \\ 0 & 1 & \cdots & 0 \\ \vdots & \vdots & \ddots & \vdots \\ 0 & 0 & \cdots & 1 \end{bmatrix}$$

Matrix Addition

Two matrices of the same order are added (or subtracted) by adding (or subtracting) corresponding entries and recording the results in a matrix of the same size. Using matrix notation, if $A = [a_{ij}]$ and $B = [b_{ij}]$ are both $m \times n$.

$$A + B = [a_{ij}] + [b_{ij}] = [a_{ij} + b_{ij}]$$

 $A - B = [a_{ij}] - [b_{ij}] = [a_{ij} - b_{ij}]$

$$A + B = [a_{ij}] + [b_{ij}] = [a_{ij} + b_{ij}]$$

 $A - B = [a_{ij}] - [b_{ij}] = [a_{ij} - b_{ij}]$

Multiplication by a Scalar

To find the product of a matrix and a scalar (a complex number), multiply each entry of the matrix by that number. This is called **multiplication by** a scalar. Using matrix notation, if $A = [a_{ii}]$, then

$$c \cdot A = [c \cdot a_{ii}] = [a_{ii} \cdot c] = A \cdot c$$
